Faculty of Humanities and Social Sciences

Madan Bhandari Memorial College

AN INTERNSHIP PROPOSAL REPORT

Quality Assurance (Software testing)

Submitted to:

Department of Computer Application

Madan Bhandari Memorial College

In partial fulfillment of the requirements for the Bachelors in Computer Application

Submitted By:

Pratima Paudel (3278609)

December, 2025

List of Abbreviations:

QA : Quality Assurance

SDLC : Software Development Life Cycle

STLC : Software Testing Life Cycle

UI : User Interface

API : Application Programming Interface

JIRA : Project management & bug tracking tool

Trello : Project/task management tool

TestRail: Test case management tool

Postman : API testing tool

Introduction

This internship proposal has been developed with the primary objective of gaining practical and professional experience in the field of Quality Assurance (Software Testing). Although theoretical knowledge of software testing has been acquired through academic courses, there is a significant need to understand how these concepts are applied in real industry environments. Therefore, this internship is intended to bridge the gap between classroom learning and actual testing practices used in software companies.

During this internship, I aim to learn different testing processes, testing tools, test case writing, test execution, defect reporting, and the role of QA in the Software Development Life Cycle. I also hope to understand how QA helps in improving the quality of software and how testing is planned and carried out in a professional environment.

By the end of this internship, I expect to be able to create test plans, write and execute test cases, find bugs, and report them properly. This internship will help me build confidence, improve my technical skills, and prepare me for future work in the software testing field.

Problem Statement

In academic courses, students are introduced to the basic theories and concepts of Software Testing. However, classroom learning alone is not enough to fully understand how testing is performed in real software development environments. In actual industry projects, Quality Assurance involves a more detailed and structured process that requires practical knowledge of test case preparation, test execution, defect identification, and proper bug reporting formats. Many students lack hands-on experience with commonly used testing tools and industry practices, which creates a gap between theoretical understanding and real-world application.

Due to this gap, students often face challenges when they enter professional QA roles, as they are not fully familiar with the workflow, communication methods, documentation style, and tools used by QA teams. They may know the concepts in theory, but they have limited exposure to how these concepts are applied in real projects to ensure software quality and reliability.

Therefore, the main purpose of this internship proposal is to minimize this gap by providing the student with an opportunity to learn and practice industry-level Quality Assurance activities. Through this internship, the student will be able to gain practical experience in testing processes, using testing tools, preparing test cases, executing tests, and reporting defects in a professional manner. This experience is expected to enhance the student's confidence, improve technical skills, and build a stronger foundation for a future career in software testing.

Objectives

1. To gain practical experience in real industry-level software testing processes.
2. To learn how to create and execute test cases and report defects properly.
3. To bridge the gap between theoretical knowledge and actual QA practices.

Description of the Internship Work (Expected)

1. **Requirement Analysis and Understanding:**

I will study and understand the project requirements to know what needs to be tested and how the software should behave.

2. **Test Case Preparation (Functional, UI, Regression Tests)**

I will create test cases for different types of testing, including functional testing to check the features, UI testing for the interface, and regression testing to ensure previous functionalities work after updates.

3. **Test Execution on Web/Mobile Applications**

I will execute the prepared test cases on web or mobile applications to verify that the software works as expected.

4. **Bug Identification and Bug Report Preparation:**

I will identify any defects or issues in the application and prepare clear bug reports, explaining the problem and steps to reproduce it.

5. **Maintaining Test Reports:**

I will keep detailed records of the tests performed, including the results, passed and failed cases, and any issues found.

6. **Basic Usage of QA Tools (JIRA, Trello, TestRail, Postman, etc.):**

I will use QA tools to manage test cases, track bugs, and perform API testing, following standard industry practices.

7. **Communication with Developers and Team Participation (Daily Stand-up):**

I will actively communicate with developers and team members, participate in daily stand-up meetings, and discuss the testing progress and issues found.

Internship Plans (Expected)

Weeks	Training Session Titles	Sub Topics
1.	Orientation and Introduction	Company Overview, Project Introduction, Basics of QA, SDLC and STLC, Introduction to test case writing.
2.	Requirement Analysis and Test Case Preparation	Understanding Project Requirements, Preparing Functional Test Cases, Preparing UI Test Cases, Preparing Regression Test Cases.
3.	Manual Testing and Bug Reporting	Executing Test Cases on Web/Mobile Applications, Identifying Bugs and Defects, Preparing Bug Reports in Standard Format.
4.	Regression Testing	Performing Regression Tests, Verifying Previous Functionalities After Updates.
5.	API Testing and QA Tools Practice	Introduction to API Testing Using Postman, Practicing QA Tools (JIRA, Trello, TestRail), Managing Test Cases and Tracking Bugs.

6.	Test Reporting and Documentation	Maintaining Test Reports, Documenting Testing Process, Summarizing Test Results.
7.	Presentation and Final Review	Presenting Internship Learning and Experience, Discussing Challenges and Feedback, Finalizing Reports and Documentation.

Expected Outcome of Internship Activities

1. **Practical Understanding of Software Testing**

I will understand how software testing is performed in real projects and learn the steps followed in industry QA processes.

2. **Ability to Create and Execute Test Cases**

I will gain the skill to prepare test cases for different types of testing and execute them properly.

3. **Bug Identification and Reporting Skills**

I will learn to find defects in the software and report them clearly using standard formats.

4. **Familiarity with QA Tools**

I will get hands-on experience using QA tools like JIRA, Trello, TestRail, and Postman for testing and tracking.

5. **Improved Professional Skills**

I will develop teamwork, communication, and problem-solving skills by interacting with developers and team members.
